WHY IS A DANDELION?

When you tread on a dandelion or clip off a thistle with a stick, you may not be aware that flowers of wondrous beauty are being spurned, but so it is. Leontodon—Lion's tooth—Dandelion that is its name, deserves a close examination under a powerful glass. That and the thistle provide acrostats for each seed, and depend on the wind to float them to fertile soil, that the kind may be continued. Weeds? Study them, as you may, under their names, after reading the general subject, "Botany," in Encyclopaedia, Vol. 4, p. 299. You can also get valuable information on printing, Vol. 22, p. 350; India paper, Vol. 10, p. 312. Presses are so perfected that a single machine will print, cut and fold for delivery 90,000 papers an hour! Other things of equal (possibly greater) interest to you are waiting your perusal in that great work.

Itching, bleeding, protruding or blind piles have yielded to Doan's Ointment. 50c at all stores. adv
